

Sebastian Gaggero

Python Backend Developer

FastAPI · REST APIs · Automation

s.gaggero87@gmail.com · sebastiangaggero.dev · [GitHub](#) · [LinkedIn](#)

PROFILE

Python backend developer focused on REST APIs, automation, integrations and data-driven applications. I build practical systems with FastAPI, PostgreSQL and Python, with attention to clear business logic, maintainable code and automated testing.

SELECTED PROJECTS

Job Radar

FastAPI · PostgreSQL · SQLAlchemy · Docker

- Built a FastAPI REST API with PostgreSQL persistence via SQLAlchemy and Alembic migrations.
- Imported Remote JSON and Python.org HTML with source-specific normalization and exact URL deduplication backed by a database unique constraint.
- Implemented a transparent rule-based scoring system to prioritize junior remote Python/backend roles.
- Tested imports, duplicate handling and API behavior with pytest; configured GitHub Actions for tests and Docker Compose for local development.

Surtr Alert

Python · WeeChat · Linux

- Handled mentions and private messages through WeeChat signal hooks and Python callbacks.
- Integrated local Linux notifications via notify-send, terminal output, Zenity and logging.
- Added channel and ignored-nick filters through native WeeChat configuration; no external web service required.

TECHNICAL SKILLS

Backend

Python · FastAPI · REST APIs · SQLAlchemy · PostgreSQL · Alembic

Automation & Integrations

Python scripting · Playwright · web scraping · API integrations · JSON · authentication · data processing

Engineering Tools

Git · GitHub · Linux · Docker · pytest · GitHub Actions

EDUCATION

Ingeniería en Conectividad y Redes — DuocUC

Completed

Programador Full Stack — 4Geeks Academy

Completed · Certificate awarded
